10G optical module price 6

Overview

"Optical Module 10g Price" The Optical Module 10g Price is classified under our comprehensive Communication Module range.When seeking a communication modul.

Key Takeaways

The price of a 10G optical module typically ranges from $10 to $300, depending on type, distance, and brand.

Price Overview

The cost of a 10G SFP+ module varies widely based on transmission distance, optical technology, and brand. Standard short-range (SR) modules for data centers are usually at the lower end of the spectrum, often $10–$50, while long-range (LR) single-mode modules can cost $100–$300 due to higher optical power and stricter performance requirements. Branded modules from major vendors may be priced significantly higher than compatible third-party options, sometimes multiple times the cost, due to support contracts and vendor lock-in.

Factors Affecting Price

Transmission Distance: SR modules are cheaper for distances up to a few hundred meters; LR modules support up to 10 km or more and cost more. Brand and Compatibility: OEM modules from Cisco, Huawei, or other major vendors are more expensive than compatible third-party modules like 10Gtek. Optical Technology: Single-mode optics and higher-quality components increase cost, while multi-mode modules are generally cheaper.

Market and Supply: Wholesale or factory-priced modules can reduce costs, especially for bulk purchases.

Practical Buying Tips

For enterprise or data center use, reliable compatible modules often provide the best cost-per-port without sacrificing performance. Check vendor compatibility to avoid network issues; many third-party modules support multiple brands and fiber types. Consider bulk purchasing or factory quotes to access lower prices and ensure consistent supply.

In summary, a typical 10G optical module can be purchased for $10–$300, with most practical deployments falling in the $20–$150 range depending on distance and brand choice.
