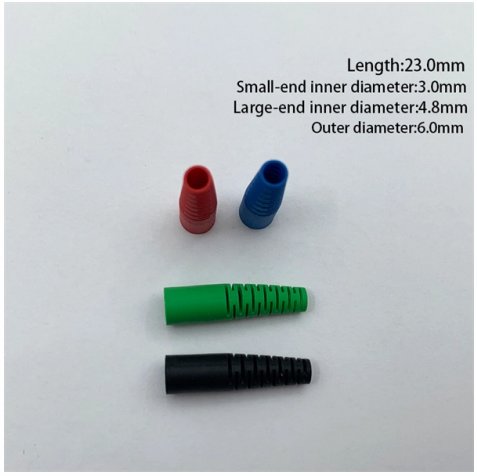
How to connect the FTTR fiber optic panel and the sub-router



Overview

The main FTTR and a sub FTTR are connected using an FTTR ADU, optical splitter and PoF cable. A sub FTTR automatically synchronizes Wi-Fi parameters from the main FTTR. Fiber to the Room (FTTR) extends fibre optic coverage through high-quality in-building cabling to every individual room, establishing the foundation for uninterrupted gigabit connections without signal degradation. Compared to traditional Ethernet or Mesh WiFi, FTTR offers higher bandwidth, lower latency, and longer lifespan (25-30 years for fiber). Huawei FTTR is available on. The FTTR technical solution is to carry out home networking through optical fiber media, deploy FTTR main gateways in distribution boxes or key locations, take the main gateway as the core, and form an FTTR optical network through optical splitters and single-core bidirectional optical fibers.
