Aluminum stranded fiber optic cable

Overview

Aluminium Longitudinal Layer Stranded Fibre Optic CableBuy Aluminium Longitudinal Layer Stranded Fibre Optic Cable at the best price from Norden Communicat.

Key Takeaways

Aluminum stranded fiber optic cables are armored, flexible, and moisture-resistant cables designed for outdoor and long-distance communication networks.

Construction and Materials

Aluminum stranded fiber optic cables typically feature a stranded loose tube design, where multiple tubes containing optical fibers are filled with water-blocking jelly to prevent moisture ingress. The tubes are stranded around a central metallic strength member, often a steel wire, which provides tensile strength during installation and operation. The cable core is wrapped with aluminum tape for moisture protection and mechanical reinforcement, and a PE (polyethylene) outer sheath offers UV resistance, abrasion protection, and environmental durability.

Some variants, like GYTA cables, include light armor with aluminum tape and high-strength loose tubes, making them suitable for direct burial, aerial, and pipeline installations. The cables can accommodate a wide range of fiber counts, from 2 to 144 fibers, depending on network requirements.

Key Features

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Moisture and water resistance: Water-blocking jelly and aluminum tape prevent fiber degradation in wet environments. Mechanical strength: Central steel wire and armored aluminum layers provide crush resistance and tensile strength. Flexibility: Stranded construction allows bending around corners and installation in conduits without damaging fibers.

Environmental protection: PE outer sheath shields against UV radiation, rodents, and harsh weather conditions. Long-distance capability: Suitable for backbone networks, LAN interconnections, trunk lines, and carrier-grade outdoor deployments.

Applications

Aluminum stranded fiber optic cables are widely used in: Long-haul communication systemsCarrier-grade outdoor networksPipeline and overhead line installationsDirect burial and underground duct systemsMetro fiber and LAN backbone connections These cables are ideal for environments requiring high reliability, moisture protection, and mechanical durability, ensuring stable signal transmission over long distances. In summary, aluminum stranded fiber optic cables combine robust mechanical protection, moisture resistance, and flexibility, making them a preferred choice for outdoor, long-distance, and high-capacity fiber optic networks.
