Are low-voltage cable trays made of metal Why

Overview

Comparing Electrical Cable Tray Materials-Aluminium, Steel, PlasticSteel is the most popular material for electrical cable trays due to its unmatched stren.

Key Takeaways

Yes, low-voltage cable trays are commonly made of metals such as steel, stainless steel, galvanized steel, and aluminum, though non-metallic options like plastic also exist.

Metal Materials for Low-

Voltage Cable TraysLow-voltage cable trays are frequently fabricated from metallic materials due to their strength, durability, and ability to support multiple cables safely. Common metals include: Steel: Offers high strength and is suitable for heavy cable loads, making it ideal for industrial and data center applications. Variants include low-carbon steel, stainless steel, and galvanized steel, which provide corrosion resistance for indoor and outdoor environments.

Aluminum: Lightweight, corrosion-resistant, and non-magnetic, aluminum trays are often used in environments where weight reduction and chemical resistance are important. Aluminum alloys, such as the 6063 series, are commonly used for marine or corrosive environments. Stainless Steel: Highly resistant to corrosion and suitable for humid, coastal, or chemically aggressive environments.

Non-

Metal Alternatives

While metals are common, non-metallic cable trays made from fiberglass reinforced plastic (FRP) or PVC are also available. These are lightweight, corrosion-proof, and electrically non-conductive, making them suitable for chemical plants or areas where electrical insulation is critical.

Advantages of Metal Cable Trays

Strength and Load Capacity: Metal trays can support heavy cable bundles without bending or sagging. Durability: Resistant to mechanical stress and long-term wear. Electrical Shielding: Steel and aluminum provide some protection against electromagnetic interference.

Fire Resistance: Metal trays are less likely to burn or release toxic gases compared to plastic alternatives.

Applications

Metal low-voltage cable trays are widely used in industrial facilities, commercial buildings, data centers, and underground or under-floor installations. They are often chosen for environments requiring robust support, corrosion resistance, and long-term reliability. In summary, low-voltage cable trays are indeed made of metal, with steel and aluminum being the most common choices, while non-metallic options are available for specialized applications.

Article Content

Comparing Electrical Cable Tray Materials-Aluminium, Steel, Plastic

Steel is the most popular material for electrical cable trays due to its unmatched strength, versatility, and durability. Variants include stainless steel cable trays and galvanized steel cable

Low Voltage Cable Tray

Low voltage cable trays originally come from aluminum, plastic, and galvanized steel materials. All cable trays that were originally made from these materials do have

Cable Tray Technical Guide A practical guide to product selection and ...

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

What is a Cable Tray? A Complete Guide for Electrical Projects

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Also known as "basket trays," these are made of welded stainless steel wires in a grid pattern. They are extremely lightweight and primarily used for low-voltage data, fiber optics, and

7 Types of Cable Trays: How to Choose the Right One

Wire mesh cable trays—often called basket trays —are constructed from welded steel wire, forming a lightweight open-grid structure. Unlike traditional formed trays, wire mesh trays rely

GUIDE CABLE TRAYS TECHNICAL

If it has excellent electrical continuity and is integrated in the installation''s equipotential bonding system, a metal cable tray reduces the coupling''s impact and thus contributes to good EMC of the electrical

Types of Cable Trays – Purpose, Advantages, Disadvantages

Wire mesh cable tray, also called basket cable tray, is a kind of cable tray made of stainless steel wires by welding wires together, forming a basket-like mesh. Cable Trays are mainly

Cable tray

These trays may be made of wire mesh, called "cable basket", or be designed in the form of a single central spine (rail) with ribs to support the cable on either side.

Cable Tray Systems Explained: The Right Solution for Modern Cable ...

In this guide, we explain what cable trays are, the main types available, how to choose the correct size and duty rating, and what to consider when designing a cable tray installation.

What Is a Cable Tray? Types, Materials, and Uses

The choice of construction material depends heavily on the installation environment, with common options including galvanized steel, aluminum, and fiberglass. Galvanized steel is the

How to Choose Cable Tray for Low Voltage System

Selecting the correct cable tray for low voltage system—such as data networking, telecommunications, security, and building automation—is a critical

What Are The Common Types of Cable Trays

Wire mesh (or basket) type trays, made from welded wire, are flexible and easy to install, making them popular for data and low-voltage applications.

Busbar Insulators vs. Cable Trays: Which Offers Better Insulation for ...

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Compare busbar insulators and cable trays for electrical insulation, safety, and cost-effectiveness. Learn which solution suits your project best.

What is Cable Tray and How it is used in Industrial applications?

This cable tray is made up of stainless steel wires by welding wires to form the basket-shaped mesh. Cable Trays are normally used for low-voltage applications, telecommunication, and

Comparing Electrical Cable Tray Materials-Aluminium, Steel, Plastic

Aluminium, steel, or plastic? Compare key features of electrical cable tray materials to find perfect match for your building''s requirements.

Network Infrastructure and Industrial Electrical Wiring

Panduit develops smarter, scalable network infrastructure and industrial electrical wiring solutions that unlock the full potential of your business

Type of Cable Tray Introduction Cable Tray Materials Electrical

Most cable tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminium alloy) or from a metal with a corrosion-resistant finish (zinc or epoxy).

Advantages and Disadvantages of Metal Cable Trays

Explore the advantages and disadvantages of metal cable trays. Learn about different types to make the best choice for your electrical system needs.
