Cable routing method for optical distribution boxes

Overview

Fiber type selection: Pick singlemode fiber for long distances and fast speeds. Network topology: Choose if you want point-to-point, ring, tree, or mesh. This choice changes how your network grows and handles problems. In this blog, we will explore the key rules for fiber optic cable routing in a Fiber Distribution Box to ensure optimal performance and longevity of your fiber optic network. It includes first determining the type of communication system (s) which will be carried over the network, the geographic layout (premises, campus, outside. e route (external building) and trunking/conduit route at site (internal building) to identify the proposed external and internal building cable G. pipes and other required accessories. You should also plan the pathway carefully and follow standards.
