Cable tray tax classification

Overview

Find the correct HSN Code for Cable Tray under GST. Check GST rates, classification, and compliance guidelines for all types of cable trays and electrical support systems at YKG Global.

Key Takeaways

Cable trays are generally classified under HSN codes based on their material and function, with steel trays under 73089090, aluminum trays under 76109090, and plastic trays under 39259090, typically attracting 18% GST. Classification by MaterialSteel Cable Trays: Most commonly classified under HSN 73089090, which covers “other structures and parts of structures of iron or steel” used as mechanical supports for electrical or network cables. These trays include ladder-type, perforated, and solid-bottom designs, along with associated fittings like bends, tees, and reducers, and attract 18% GST under the current slab.

Aluminum Cable Trays: Classified under HSN 76109090, which pertains to “other structures and parts of structures of aluminum.” These trays are also used for supporting electrical or communication cables and generally carry the same 18% GST rate.

Plastic or PV

C Cable Trays: These are categorized under HSN 39259090, covering “other builders' ware of plastics, not elsewhere specified or included.” They serve as channels or ducts for cable management and are taxed at 18% GST as well. Classification by UsageElectrical vs Network Cables: The type of cable carried (power, LAN, CCTV, or communication) does not change the HSN classification. The classification depends primarily on the tray's material and whether it is a finished structural item or part of a larger electrical system.

Construction Projects: When supplied as part of a construction project, cable trays are treated as goods under the relevant HSN code. If supplied as part of a composite works contract (installation services included), GST may apply on the full contract value at the works contract rate, but the underlying HSN still guides purchase and stock records.

Accessories and Components

Cable tray accessories such as covers, bends, tees, reducers, and supports are generally classified under the same HSN as the main tray material. This ensures consistency in invoicing and GST reporting.

Practical Compliance Tips

Always disclose the correct HSN code on tax invoices. Maintain consistency in GSTR-1 and GSTR-3B filings to avoid mismatches. Verify the material and primary use of the tray before assigning the HSN code to ensure compliance and avoid disputes during audits.

By following these guidelines, businesses can ensure proper GST compliance and accurate classification of cable trays for both domestic and international trade.
