

Concealed Network Box Connection

Overview

In modern electrical installations, a concealed PVC box plays a vital role in ensuring a neat, safe, and efficient wiring system.

Key Takeaways

A concealed network box provides a flush-mounted, professional, and safe solution for organizing and connecting network cables within walls.

Types of Concealed Network Boxes

Type 86 Concealed Network Socket: Standard 86mm x 86mm electrical box designed for flush-mount installation in drywall or plasterboard. It hides Cat6 or similar network cables behind the wall, protecting connections from dust and physical damage while maintaining a clean aesthetic. **Recessed Outlet Kits:** These kits, often used behind wall-mounted TVs, include a recessed box, faceplate, and cable management components.

They allow power and low-voltage cables to be hidden, saving space and improving visual appeal. **Fiber Optic Distribution Boxes (e.g., Chint NEX2):** Designed for indoor use, these boxes organize and distribute weak current or fiber optic cables in residential or commercial settings. They can be mounted on walls or surfaces and provide ample space for multiple cables.

Compact LAN/TV Connection Boxes: Small frames with RJ45 keystone compatibility, ideal for single or dual network connections. They include dust covers, labeling fields, and snap-in modules for easy installation in flush-mounted setups.

Installation Guidelines

Verify Wall Construction: Ensure walls are drywall or plasterboard. Brick or concrete walls require specialized mounting systems. **Check Backbox Compatibility:** The backbox must accommodate the cable type and internal wiring.

Depth is critical for flush mounting. **Plan Cable Routing:** Concealed boxes require careful routing through wall cavities to prevent cable damage. **Install Backbox:** Secure the box to studs or drywall, ensuring it is level.

Terminate Cables: Use a punch-down tool to connect Cat6 or fiber cables to the socket or keystone module, following color codes. **Mount Faceplate:** Snap the faceplate onto the backbox so it sits flush with the wall, leaving no gaps.

Advantages of Concealed Network Boxes

Aesthetic Appeal: Flush-mounted boxes hide cables, creating a clean, professional look. **Safety and Protection:** Concealed boxes protect connections from dust, physical damage, and accidental disconnection. **Flexibility:** Many boxes support modular keystone inserts, allowing upgrades or changes without major wall modifications.

Space Saving: Recessed designs prevent protrusions, ideal for tight spaces or behind wall-mounted devices.

Considerations

Ensure the box is indoor-rated; most concealed network boxes are not suitable for outdoor use. Choose the correct size and type based on the number of connections and cable type. Proper labeling and documentation help maintain organized cabling, especially in multi-room or office setups.

By following these guidelines, a concealed network box can provide a reliable, safe, and visually seamless network connection for home or office environments.
