Cost of 24-core Aerial Optical Cable

Overview

Need durable aerial fiber optic cables? Explore 24-144 core options from verified suppliers with UV resistance and custom lengths. Get competitive pricing for outdoor installations.

Key Takeaways

The price of a 24-core aerial optical fiber cable typically ranges from $1 to $5 per meter, depending on fiber type, cable construction, and installation specifications.

Pricing Overview

The cost of a 24-core aerial optical cable is not fixed and depends on several technical and logistical factors. Key determinants include: Fiber Type: Single-mode fibers (SMF) are more expensive than multimode fibers (MMF) due to their long-distance transmission capabilities and precision manufacturing requirements. Standard single-mode fibers like G.

652D are cheaper, while G. 657A1 fibers with improved bending radius are more costly. Cable Construction: Aerial cables, particularly ADSS (All-Dielectric Self-Supporting) cables, are designed for overhead installation without metallic components.

They include features like loose-tube structures, water-blocking compounds, aramid reinforcement, and polyethylene or anti-tracking sheaths. Enhanced mechanical strength and environmental resistance increase the price. Span Length and Mechanical Design: Longer spans (e.g., 200m, 300m, 500m) require additional aramid reinforcement and stronger tensile properties, which raise costs.

Maximum spans for ADSS cables can exceed 1000 meters, but longer spans are more expensive due to material and engineering requirements. Brand and Certification: Branded fibers from Corning, YOFC, or Fujikura are more expensive than generic fibers. Compliance with standards like ITU-T G.

652. D/G. 657.

A1, IEC 60794-1-2, and ANSI/ICEA S-87-640 ensures quality but can also affect pricing. Sheath Type and Voltage Rating: Standard polyethylene (PE) sheaths are more affordable, while anti-tracking (AT) sheaths for high-voltage environments cost more due to specialized materials.

Typical Price Range

Standard 24-core aerial fiber cable: Approximately $1–$3 per meter for basic single-mode cables with PE sheath and standard spans.

ADS

S 24-core cable with enhanced features: Approximately $3–$5 per meter, depending on span length, aramid reinforcement, anti-tracking sheath, and brand.

Summary

When budgeting for a 24-core aerial optical cable, consider fiber type, cable design, span length, sheath material, and brand.

ADS

S cables are ideal for overhead installations on power lines or poles, offering self-supporting, high-tensile, and weather-resistant properties, but they come at a higher cost compared to standard aerial cables. For precise pricing, it is recommended to request quotes from verified suppliers, specifying the required span, fiber type, and environmental conditions.
