Dimensions of a Two-Phase Distribution Box

Overview

The document provides details for designing the electrical distribution box and circuits for a residence. It includes specifications for the main circuit breaker such as size, type, and tripping capacity.

Key Takeaways

Two-phase distribution boxes typically range from 300 mm to 600 mm in height, 200 mm to 400 mm in width, and 100 mm to 200 mm in depth, depending on the number of ways and manufacturer specifications. Typical DimensionsTwo-phase distribution boxes are designed to house circuit breakers, busbars, and wiring for residential or commercial applications. While exact dimensions vary by manufacturer, standard ranges are: Height: 300 mm to 600 mmWidth: 200 mm to 400 mmDepth: 100 mm to 200 mm These dimensions accommodate 2-pole or 4-pole breakers, with sufficient space for wiring and mounting hardware.

Design Considerations

Mounting: Boxes often include studs and adjustable nuts for easy installation and removal of the pan assembly. Breaker Compatibility: Designed to fit MCBs, MCCBs, or RCDs, with modular DIN rail components for flexibility. Clearance: Manufacturers recommend at least 150 mm to 200 mm of clearance around the box for safe access and maintenance.

Enclosure Type: Indoor boxes are typically painted steel or plastic, while outdoor versions may be weatherproof with additional sealing.

Selection Tips

Verify the number of ways (number of circuit breakers) required for your installation. Two-phase boxes usually support 2–12 ways. Check the incoming and outgoing cable entry points to ensure compatibility with conduit or cable glands.

Consider future expansion; some boxes allow top or bottom extensions for additional circuits. By using these typical dimensions and design guidelines, you can select a two-phase distribution box that fits your installation requirements safely and efficiently.
