

Distribution Box Manufacturing Specifications and Dimensions

Overview

DISTRIBUTION BOXES Provide high-density polyethylene drop or distribution box with holes punched suitable to receive locking seals. The box shall be strong.

Key Takeaways

Distribution boxes are manufactured in various sizes and configurations, with dimensions, materials, and technical specifications tailored to capacity, mounting, and industrial requirements.

Standard Dimensions and Configurations

Distribution boxes come in multiple types, including TOP-TS, TOP-TF, TOP-LS, TOP-PS, TOP-PF, and TOP-S, with capacities ranging from 1-way to 36-ways. Dimensions typically include length, width, and height, which vary according to the number of ways and intended application. For industrial electrical boxes, single-gang, double-gang, and multi-gang configurations are common, with larger boxes designed to accommodate multiple devices, connectors, or circuit breakers.

Material and Protection

Industrial distribution boxes are often made from UL-compliant materials and designed for IP67-rated protection, ensuring resistance to dust, water, vibration, and harsh environmental conditions. Glass-reinforced polyester or metal enclosures are used for robustness, and doors may include hinges and locking mechanisms for secure access.

Electrical and Mechanical Specifications

Busbars and Droppers: Phase busbars are typically made of EC grade aluminum, with cross-sections such as 72x50x8 mm for 63/100 KVA and 120x50x15 mm for 160/315 KVA boxes. Feeders and incomer droppers match these dimensions to handle rated currents. **Isolators and Cutouts:** Switch disconnectors conform to IS: 13411 standards, with arc-chutes to extinguish arcs and porcelain cutouts for outgoing circuit protection.

Cable Management: Pre-wired boxes support M8, M12, or M16 connectors, with standard cable lengths of 1M, 2M, 3M, 4M, 5M, and 10M, and options for customization.

Mounting and Installation

Distribution boxes are designed for wall or panel mounting, with mounting sizes specified in catalogs. Industrial boxes may include hinged doors on both sides, proper phase sequence labeling (RYB), and PVC insulating sleeves for safety. Multi-gang boxes allow for future expansion and prevent overcrowding, ensuring compliance with electrical codes.

Additional Features LED indicators for power and function status Oil-resistant and vibration-resistant construction Customizable labeling and coding for industrial automation systems Pre-wired configurations for rapid installation in robotics, processing, and automation environments. In summary, distribution boxes are engineered to meet capacity, safety, and environmental requirements, with precise dimensions, robust materials, and standardized electrical components to ensure reliable performance in industrial and commercial applications.
