

Distribution box leakage protection capacity

Overview

Household distribution box: Small in size, with a relatively low protection level, integrating leakage protection, air switches, etc. □Premium Materials□The shell and parts are made of highly flame-retardant and impact-resistant plastic, with excellent performance and reliability. □Insulation Design□The 8 way circuit breaker have visible window, sturdy and with good insulation. □Quick Installation□This indoor distribution box. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. Widely applied in buildings, industrial. Residual current protection (RSD/RCCB/RCBO): Detects leakage current and cuts off power to reduce electric shock risk. Earthing connection: Ensures proper grounding to maintain safety and system stability.
