Domestic FRP Cable Tray Technology

Overview

An FRP Cable Tray is a cable management system made from Fiber Reinforced Plastic, a composite material consisting of high-strength glass fibers and resin. Unlike metal trays, FRP trays are non-conductive, lightweight, and highly resistant to corrosion, chemicals, and extreme. FRP cable trays are one of the most widely specified secondary infrastructure products in industrial, energy, water, and data centre construction, and one of the least understood. Here are fifteen facts about what they are made from, how they perform, and why they are increasingly the default. Against this backdrop, the FRP Cable Tray (Fiberglass Reinforced Plastic Cable Tray) has become the preferred solution in fields such as electricity, communication, and chemical industry, thanks to its unique material properties and design advantages. Compared with traditional galvanized steel trays, FRP cable trays are lighter in weight, corrosion resistant, non-magnetic and electrically insulating, which makes them ideal for chemical.
