Fiber optic cable single-cup

Overview

Fiber Optic Cable | Farnell® GermanyFarnell's fibre optic cables are engineered to provide high-speed, high-bandwidth data transmission over long distances.

Key Takeaways

A single-cup fiber optic cable typically refers to a single-mode fiber optic cable terminated with UPC (Ultra Physical Contact) connectors, designed for high-speed, long-distance data transmission. OverviewSingle-mode fiber optic cables are designed to carry light signals over long distances with minimal signal loss. They use a single glass core that allows only one light mode to propagate, making them ideal for high-bandwidth applications such as telecommunications, internet backbones, and long-distance networking.

The UP

C connector type ensures low insertion loss and high return loss, providing reliable connections for sensitive data transmission.

Cable Construction

Loose Tube vs.

Tight-

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Buffered: Loose tube cables encase the fiber in a protective tube, suitable for outdoor installations and harsh environments, while tight-buffered cables are more flexible and easier to handle for indoor use. Outdoor Features: Some single-mode cables include rodent protection, UV-resistant jackets, and pulling aids for underground or aerial installation. Core Count: Single-fiber cables have one core, but multi-core versions exist for larger networks.

Single-core cables are often used for point-to-point connections. ConnectorsUPC (Ultra Physical Contact): Provides a polished, low-loss connection with minimal back reflection, commonly used in single-mode applications. LC/UPC or SC/UPC: These are standard connector types; LC is smaller and suitable for high-density patch panels, while SC is larger and easier to handle.

ApplicationsHigh-speed internet and broadband networksLong-distance telecommunicationsData centers and enterprise networkingOutdoor installations along railways, streets, or underground conduits AdvantagesHigh bandwidth and long-distance transmissionLow signal attenuationImmunity to electromagnetic interferenceSecure data transmission due to lack of radiated signals Single-fiber UPC cables are widely available from suppliers like Corning, Mouser, and Eland Cables, with options for both indoor and outdoor use, and can be supplied in various lengths and pre-terminated assemblies for quick deployment.
