Free quote for cold aisle explosion-proof type

Overview

Cool Shield™ products provide customers with versatile, turnkey aisle containment systems for new or existing critical spaces.

Key Takeaways

Cold aisle containment systems can be customized for explosion-proof environments, with pricing depending on size, materials, certifications, and installation requirements.

Overview

A cold aisle containment (CAC) system isolates cold supply air from hot server exhaust air, improving cooling efficiency, reducing hotspots, and lowering energy costs in data centers. For hazardous environments, the system can be designed with explosion-proof features, ensuring compliance with standards such as UL 1203, NEC 500, ATEX, and IECEx. These systems are suitable for both retrofits and new builds, and can be modular, ceiling-hung, or freestanding depending on your facility layout.

Key Features for Explosion-

Proof CAC

Materials: Steel, aluminum, or polycarbonate enclosures with reinforced walls and flameproof joints. Certifications: ATEX Zone 1/2, C1D1, UL 1203, IECEx for hazardous areas. Doors and Access Panels: Soft-close sliding or hinged doors designed to maintain containment while allowing safe access.

Customization: Panels can be tailored to aisle width, rack height, and ceiling integration, including powder-coated finishes for durability. Energy Efficiency: Properly configured containment can reduce cooling costs by up to 10% annually.

Pricing Considerations

The cost of an explosion-proof cold aisle system varies based on: Enclosure size and number of racksMaterial choice (steel is stronger but heavier; aluminum is lighter; polycarbonate is corrosion-resistant)Certification level (Zone 1/2 or C1D1/C1D2)Complexity of installation (freestanding vs. ceiling-hung, custom layouts)Additional features (hinged vs. sliding doors, soft-close mechanisms, powder coating) Compact systems for a single aisle or small racks are at the lower end of the price range, while full-scale data center installations with high safety ratings are significantly more expensive. How to Request a Free QuoteProvide your facility details: aisle length, rack dimensions, ceiling height, and layout.

Specify explosion-proof requirements: certification type, hazardous zone classification, and material preferences. Contact vendors: Companies like EDP Europe, Legrand, Cool Shield, and Accelevation offer custom solutions and can provide free quotes based on your specifications. Include installation preferences: retrofitting vs. new build, freestanding vs. ceiling-hung, and access panel types.

By sharing these details, vendors can provide a tailored quote including lead times, material options, and installation services.

Hot & Cold Aisle Containment Systems For Data

Cool Shield™ products provide customers with versatile, turnkey aisle containment systems for new or existing critical spaces. Our offerings range from a single row

Cold Aisle Containment in Data Centers | Subzero

With cooling provided through a raised floor, this cold aisle containment project uses rigid wall panels in conjunction with the Polar Cap 2 roof system to provide

Cold Aisle Containment

High-quality, reliable soft close, zero threshold synchronised sliding doors that open to the full aisle width. Range of roof options, including FM approved roof panels

Cold Aisle Containment | Legrand

By maintaining consistent, predictable temperatures, cold aisle containment minimizes thermal stress and reduces the risk of overheating, improving reliability and extending equipment lifespans.

AisleFrame™ Containment System

The AisleFrame System delivers freestanding containment for hot aisle and cold aisle data center configurations without relying on ceiling infrastructure or raised floors.

Cold Aisle Containment

Aisle containment in the data center requires that cabinets are aligned in a hot aisle/cold aisle layout. Containment panels or strips create a partition to isolate either the server supply air (cold aisle

Aisle Containment | Modular Cleanroom & Data Center Containment ...

Depending on your facility''s layout, Armstrong Aisle Containment Solutions offer both Hot Aisle Containment (HAC) and Cold Aisle Containment (CAC) systems to suit new builds or retrofit

Hot & Cold Aisle Containment Panels

Hot & Cold Aisle Containment Panels at bulk/wholesale pricing. Used for aisle containment solutions in mission-critical data centers to ensure consistent temps.

Hot and Cold Aisle Containment Solution | Legrand

Cold aisle containment encloses the cold aisles to ensure only cold air is supplied to servers. This approach is normally used with in-row cooling and raised floors and is more common in retrofits.

Flammable and Explosion Proof Refrigerators

Flammable and Explosion Proof Refrigerators Safely store volatile solvents and intermediates, in flammable and explosion-proof refrigerators that meet NFPA and OSHA standards. Contents are

Consult about cold aisle explosion-proof type

Consult about cold aisle explosion-proof type What is a Cold Aisle Containment system? A Cold Aisle Containment (CAC) system encloses the cold supply air within the aisle, preventing it from mixing

TSH Explosion Proof Combination Refrigerator/Freezer

TSH Explosion Proof Combination Refrigerator/Freezer. Prevent the triggering of an explosion inside or outside of the unit with Thermo Scientific Explosion-Proof Refrigerator/Freezers.
