General Specifications of Lighting Distribution Boxes

Overview

Distribution Box Specs It performs well in wet locations with the water-proof rating of IP66. With the maximum carrying capacity of 6000W, it can be applie.

Key Takeaways

Lighting distribution boxes are designed to safely house electrical components, provide organized wiring, and comply with international safety standards.

Construction and Materials

Lighting distribution boxes are typically made from anodized aluminum, stainless steel, or galvanized steel, providing robustness, corrosion resistance, and durability. The box thickness is generally not less than 2mm, and the design often includes reinforced channels and slanted roofs to prevent water accumulation and enhance structural integrity. Doors are equipped with lockable mechanisms and may feature inner and outer doors for added security.

Hinges are designed for smooth operation and long service life, often rated for over 10,000 cycles.

Electrical Components and Layout

Internally, lighting distribution boxes accommodate air switches, circuit breakers, neutral and earth bars, and terminal blocks. Typical configurations include 32A three-pole main switches, 16A single-pole spaces, and 20A two-pole switches, with clear labeling for easy identification. Components are arranged to ensure safe clearance, heat dissipation, and convenient wiring, often with metallic or heat-resistant insulating barriers between devices.

Terminals can accept multiple conductor sizes, such as 3 x 2. 5mm², 2 x 4mm², or 1 x 6mm².

Mounting and Installation

Distribution boxes can be wall-mounted, flush-mounted, or surface-mounted, with multiple cable entry points and knock-out holes for flexible installation. Mounting accessories typically include steel clips, screws, and brackets for secure attachment to trunking, conduits, or BESA boxes. Some boxes feature adjustable DIN rails for depth and horizontal alignment during installation.

Protection and Safety

Boxes are designed to meet IP30 to IP55 protection levels, providing resistance against dust, water, and corrosion depending on the application. All components comply with IEC, DIN, CEE, and GB standards, and high-quality brands like ABB or Schneider are commonly used. Earthing points are provided on both sides, and the boxes include rubber gaskets to maintain sealing integrity.

Type-tested certification from approved laboratories ensures compliance with safety and performance standards.

Additional Features

Spacious wiring compartments for easy access and maintenance Clear labeling of terminals and bus bars for organized connections Provision for incoming and outgoing cables with heavy-duty cable glands Lockable doors and tamper-resistant design for security These specifications ensure that lighting distribution boxes provide safe, reliable, and efficient distribution of electrical power in residential, commercial, and industrial installations.
