High Temperature of Outdoor PoE Switches

Overview

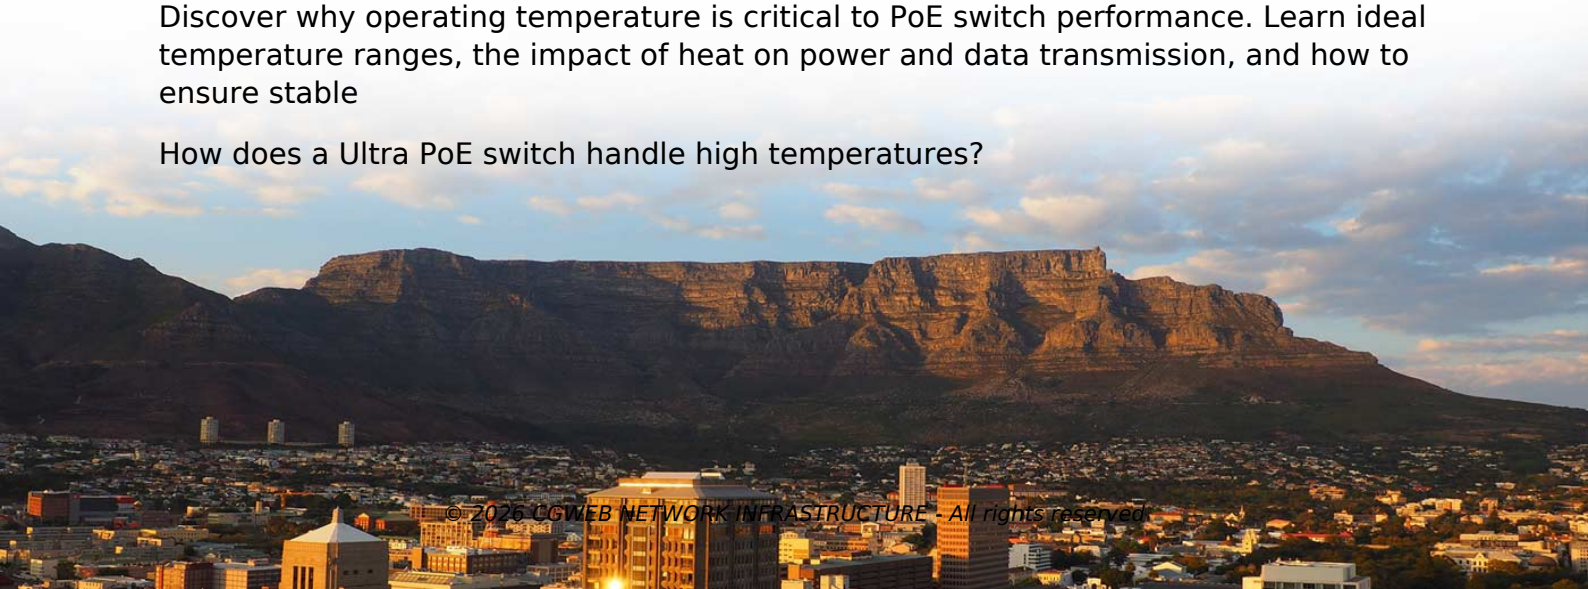

Industrial-grade protection designis the primary standard for outdoor PoE switches. Switches truly suited for outdoor surveillance should operate stably within an extreme temperature range of-40°C to 85°Cand possessIP40 level protection, effectively resisting dust and moisture. In today's intelligent and networked environments, PoE switches are widely used in fields such as security surveillance, wireless AP coverage, and smart building control due to their integrated data and power supply capabilities. However, the stable operation of PoE switches depends not only on. A Ultra PoE switch is designed to operate in a variety of environmental conditions, including high-temperature environments, particularly in industrial, outdoor, or harsh indoor settings. Not cheap though as you may imagine. They are designed for industrial use, but they are available.
