High-altitude cableway rescue

Overview

More than 300 tourists onboard the suspended cabins of Asia's highest cable car (13,054 ft.) were rescued following dramatic efforts over several hours in the north Kashmir hill station of Gulmarg. It is important to recognize that impossible ta help to the others, take/not know how of your self. All systems must have a back system! if you make a mistake, you will about it later! difficult access (terrain, snow, weather.); Thank You for Your attention. Dear ICAR Air Rescue Commission colleagues and friends: I am honored to report the publication of the efforts of an esteemed group of ICAR veteran high-altitude rescue mountaineers, pilots, rescue specialists, and authors. The paper was published this past week in High Altitude Medicine and. The Retractable Lifeline Fall Arrest Device is a compact and high-strength safety solution specifically engineered to provide dependable protection during high-altitude work across demanding industrial environments. Designed with an advanced automatic locking mechanism, the device activates. However, air rescue operations at very high altitude (VHA), above 3500 m, are inherently hazardous because of challenging topography, dynamic weather, and hypo-baric hypoxic environment. Currently, no established international guidelines exist for helicopter rescues at VHA. Methods: We conducted a. The police, army and SDRF have completed the rescue operation to evacuate more than 300 tourists stranded midair after the cable car system developed technical problems at the ski resort of Gulmarg Gondola in north Kashmir on Monday afternoon, according to police.
