Household power distribution box current stabilizer model

Overview

AVR series full-automatic ac voltage regulator is a newly designed product on the basis of SVC series product.

Key Takeaways

The DEB Series and ATO 3 kVA single-phase automatic voltage stabilizers are popular models for whole-house current stabilization.

DEB Series Automatic Voltage Stabilizer

The DEB Series AV

S is designed for whole-house protection, integrating current monitoring to stabilize both voltage and load current in real time. Key features include: Control Types: Relay Control: Uses electromagnetic switches for ±8% voltage regulation. Servo Control: Motorized brush mechanism for precise ±3% regulation, ideal for sensitive electronics.

Capacity Range: 1 kVA to 12 kVA, suitable for single-phase residential setups. Safety & Certifications: ISO9001, CE, RoHS, FCC certified. Applications: Protects home theaters, smart home devices, and high-end home offices.

Additional Features: Real-time current display for monitoring load consumption, detecting overloads, and optimizing energy use. The compact wall-mounted design integrates with the main distribution panel, eliminating the need for multiple point-of-use protectors.

AT

O 3 kVA Single-Phase StabilizerThe ATO 3 kVA single-phase stabilizer is another reliable option for home use. Its features include: Input Voltage Range: 140V to 260V, stabilizing output to 220V–230V. Technology: LED relay type with intelligent CPU centralized control.

Protection: Cuts off appliances if voltage exceeds safe limits, preventing damage. Customization: Can be configured for split-phase systems (L1, L2 + G) for U. S. standards.

Selection Guidance: Choose based on total household load, power factor, and appliance types to ensure proper kVA rating.

Other Considerations

When selecting a household current stabilizer: Waveform Quality: Sine wave stabilizers are preferred for sensitive electronics, while square wave models are more affordable but may cause harmonic distortion. Built-in Protections: Look for thermal overload, surge/spike protection, low/high voltage cut-off, and intelligent overcurrent protection. Monitoring: Digital displays for voltage and current help track household energy usage and prevent overloads.

Both the DEB Series and AT

O 3 kVA stabilizers provide reliable whole-house voltage and current stabilization, with features tailored for modern residential electrical systems. Choosing the right model depends on your home's total load, sensitivity of appliances, and desired precision in voltage regulation.
