How to identify a 1G multimode optical module

Overview

Learn how to identify single-mode and multimode SFP modules with our comprehensive guide. Explore SFP features, testing methods, and compatibility.

Key Takeaways

A 1G multimode SFP module is typically labeled "MM" or "1000BASE-SX," operates at 850 nm, and is designed for short-range transmission over multimode fiber. Key Identification Methods1. Check the Labeling and Markings Most 1G multimode SFPs are marked with "MM" or "1000BASE-SX" on the module itself.

Single-mode modules, in contrast, are usually labeled "SM" or with long-wavelength standards like 1000BASE-LX. Manufacturer documentation or datasheets can confirm the module type. 2.

Observe Connector and Pull-

Ring Colors Color coding is a practical visual cue.

Multimode SF

Ps often have orange or aqua connectors, while single-mode SFPs typically use yellow connectors. Pull-ring colors may also follow TIA-598-C standards: multimode modules under 40G often have black or beige pull rings, whereas single-mode modules use blue, green, or purple. 3.

Check the Wavelength 1G multimode SFPs operate at 850 nm, optimized for short-range communication (up to ~550 meters for OM4 fiber).

Single-mode SF

Ps use longer wavelengths, typically 1310 nm, 1490 nm, or 1550 nm, for long-distance transmission. 4.

Transmission Distance Multimode SF

Ps are designed for short-range links, generally less than 2 km. If the module is intended for longer distances, it is likely single-mode. 5.

Technical Verification For precise identification, you can use tools like a power meter or Optical Time-Domain Reflectometer (OTDR) to measure optical output and verify compatibility with multimode fiber. Some modern SFPs are dual-mode, so checking the EEPROM or module specifications ensures correct identification.

Summary

A 1G multimode SFP module is a hot-swappable transceiver that transmits 1 Gigabit per second over multimode fiber, usually following the 1000BASE-SX standard at 850 nm. Identification relies on label markings, connector color, wavelength, and transmission distance, with technical verification available for high-accuracy deployments. Correct identification ensures compatibility with multimode fiber, prevents link failures, and maintains network performance.

Confused about whether your SFP is single-mode or multimode? Learn the differences, visual cues, wavelength ranges, and compatibility to avoid mismatched fiber connections and costly

How to Check If My SFP Is Single Mode or Multimode

Learn how to check SFP single mode or multimode, and choose the right fiber type and wavelength to keep your network stable.

The Difference Between Single/Dual Fiber and Single/Multi-Mode

Understanding the distinction between single vs. dual fiber and single-mode vs. multi-mode is essential when deploying optical modules in any fiber optic network.

Single-mode vs Multimode SFP 2026: Fiber Types and distances

A guide to single-mode vs multimode SFP modules. Covers fiber types, wavelengths, distances, BiDi, CWDM/DWDM, SMF vs MMF selection, and application scenarios.

The Ultimate Guide to SFP Modules (2026): Types, Speeds

Read the definitive 2026 guide on SFP modules. We explain Single Mode vs Multimode, DDM diagnostics, and how to choose the right transceiver for Cisco, Juniper, and more.

Single-Mode vs Multimode: How to Check Your SFP Module Type?

To determine whether the SFP module in your hand is single-mode or multi-mode, the most straightforward method is to check the color of the pull ring, for example, blue pull rings and red

SFP Modules: Types, Selection Guide & Applications

Learn about SFP modules—types (single-mode, multimode), how to choose, and uses. Compare SFP vs SFP+ for networks, data centers, and industrial setups.

How to Check SFP Light Levels Using CLI Commands

How SFP Optical Telemetry Works (SFF-8472 vs CMIS + CLI Commands) Quick Answer (Featured Snippet): SFP light levels are measured using Digital Optical Monitoring (DOM), where the

Wholesale Optical Transceivers Module | 100G QSFP28, 40G QSFP

Shop high-speed optical transceivers from Unitekfiber. We offer 100% compatible 40G, 100G, and 400G QSFP-DD modules for data centers. Expert technical support & wholesale pricing.

Fiber Optic Color Code: The Ultimate TIA-598-C Guide (2026)
