Key Takeaways

To safely remove a distribution box panel, first cut off the power, prepare tools and safety equipment, and carefully disassemble the panel while protecting wires and components.

Safety Precautions

Before starting, ensure all power is completely shut off by turning off the main switch to prevent electric shock. Wear appropriate personal protective equipment (PPE) such as insulated gloves, safety glasses, and protective clothing. Only qualified personnel should perform the removal, especially for high-voltage panels.

Inspect the panel for any visible damage or loose components before removal. Gather tools such as screwdrivers, wrenches, and pliers, ensuring they are insulated and suitable for electrical work. Document wiring connections by labeling wires or taking photos to ensure correct reinstallation.

Unscrew and unbolt the panel: Use appropriate tools to remove screws or bolts securing the panel to its mounting surface.

Handle the panel safely: If the panel is large or heavy, use lifting equipment such as a crane, forklift, or eyebolts provided on the panel for safe handling. Ensure the panel is supported and does not tilt or fall. Move and store the panel: Place the removed panel in a clean, dry, and ventilated area, standing upright and avoiding stacking to prevent damage.

Cover it with protective sheets if temporary storage is required.
