Incoming main line switch of distribution box

Overview

The main switch disconnects the distribution box from the incoming supply. In small residential boards, this may be a double-pole main switch. Selection. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. Single Phase Distribution Box generally consists of Double Pole MCBs, Single Pole MCBs, and RCCBs. Make poor choices here, and you're potentially looking at: Electrical systems are like a. Distribution Board aslo know as “Panel Board”, “Switch & Fuse Board” or “Consumer Unit” is a box installed in the building containing on protective devices, such as circuit breaker, fuses, isolator, switches, RCDs and MCBs etc. Each outgoing line can be individually.
