OPPC Optical Cable Classification

Overview

Introduction Construction Outdoor OPPC Cable Optical Phase Telecommunications: OPPC cables facilitate telecommunications for medium and high voltage power.

Key Takeaways

OPPC cables are aerial optical cables integrated into phase conductors, combining electrical power transmission and fiber optic communication, primarily for voltages below 110 kV. OverviewOPPC (Optical Phase Conductor) is a specialized type of aerial cable that integrates optical fiber units within the phase conductor itself, allowing it to simultaneously carry electrical current and provide communication or data transmission capabilities. Unlike Optical Ground Wire (OPGW), OPPC is energized along high-voltage power lines, making it suitable for networks where a ground wire is not present.

Construction

Core Fibers: Optical fibers are typically embedded loosely in protective buffer tubes, which are often made of stainless steel or other protective materials. Armouring: To meet mechanical and electrical requirements, OPPC cables are armored with one or more layers of aluminum, aluminum alloy, aluminum-clad steel, or galvanized steel, helically stranded around the fibers. Phase Conductor Integration: OPPC replaces one or more phase conductors in the line, maintaining the mechanical and electrical characteristics of the original conductor.

Fiber Capacity: The optical fiber units inside the steel tubes can accommodate up to 144 cores, depending on the design.

Applications

Voltage Levels: Primarily used in suburban and rural distribution networks with voltages below 110 kV, including 35 kV lines. Network Integration: OPPC can replace one of the three phase conductors in a transmission line, supporting both power transmission and communication simultaneously.

Alternative to OPG

W: Ideal for areas where installing a ground wire is not feasible, providing a cost-effective solution for integrating fiber optics into existing power lines. Standards and ClassificationIEC 60794-4-30: 2021: This standard specifies the optical fiber, cable elements, construction requirements, installation, operating conditions, and testing procedures for OPPC cables. Environmental Compliance: Environmental declarations can be built according to IEC TR 62839-1.

Mechanical and Electrical Properties: OPPC cables are designed to simulate the mechanical and electrical characteristics of the phase conductor they replace, ensuring reliability under live line conditions.

Advantages

Combines power transmission and communication in a single conductor. Reduces the need for additional ground wires in low and medium voltage networks. Suitable for harsh environmental conditions due to robust armoring and protective design.

Efficient use of existing transmission towers and routes, filling gaps in power distribution automation networks. In summary, OPPC cables are classified based on their construction, fiber capacity, voltage rating, and compliance with IEC standards, serving as a dual-purpose solution for electrical power and communication in aerial distribution networks.

Introduction Construction Outdoor OPPC Cable Optical Phase

Telecommunications: OPPC cables facilitate telecommunications for medium and high voltage power lines, enabling the construction of distribution automation stations in urban and rural

Optical Phase Conductor Overview | PDF | Optical Fiber

Optical Phase Conductor (OPPC) serves as an alternative to Optical Ground Wire (OPGW) in telecommunications when no ground wire exists, designed to mimic the mechanical and electrical

IEC 60794-4-30:2021

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

The corresponding environmental declaration can be built according to IEC TR 62839-1. The OPPC is a substitute for a conventional phase bare conductor containing optical fibres. Usually, the fibres are

Optical Phase Conductor OPPC | AFL EMEA

Optical Phase Conductor (OPPC) is used as an alternative telecommunications solution when there is no existing ground wire, meaning Optical Ground Wire

Optical Fiber Composite Phase Wire (OPPC)

OPPC is a new type of special electrical cable that makes up the unit of fiber in the phase with the function of phase and communication. It is mainly applied in low voltage classes 110kV, urban power

oppc cable for sale, Optical Phase Conductor (OPPC)

Optical Phase Conductor (OPPC) 1. Application It is mainly applied in voltage classes under 110kV, urban power distribution grid and rural power grid. 2. Section diagram OPPC is a new kind of special

What is OPPC Cable? Optical Phase Conductor

OPPC stands for Optical Phase Conductor, also known as Optical Fiber Composite Phase Wire. It is an advanced type of overhead power cable that combines the functions of a traditional

IEC 60794-4:2018

This document excludes figure-8 optical cables to be used on telephone utility poles. The IEC TR 62839-1 gives recommendations to provide the customer with the environmental declaration

OPPC power phase optical cable

OPPC cables are primarily used in voltage levels below 110kV, such as suburban distribution netwo ks and rural. It is mainly applied in voltage classes under 110kV, urban power distribution grid and rural

Characteristics of OPPC Power Optical Cable

Optical fibre composite overhead phase conductor (OPPC) is a new type of special power composite cable which combines optical fibre unit and traditional phase conductor in the wire.

An In-Depth Guide to Oppc Cables: Standards, Grades, and

Types of OPPC Cables Optical Phase Conductor (OPPC) cables are advanced composite cables that integrate optical fibers within a metallic conductor, enabling simultaneous transmission of electrical

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Optical Fiber Composition Phase Conductor (OPPC)

Application Optical Fiber Composition Phase Conductor (OPPC) is the optical cable that compounds the fiber in the phase conductor. OPPC makes full use of the power system''s own line resources to avoid

BS EN IEC 60794-4-30:2021 Optical fibre cables: Aerial optical cables: OPPC

BS EN IEC 60794-4-30 provides manufacturing guidelines for OPPC optical fibre cables that can withstand environmental or mechanical forces such as longitudinal compression, crushing, bending,

What Is OPPC Cable | Hunan Jiahome

What Is OPPC Cable Optical Phase Conductor (OPPC) cable is a specialized type of power line cable that integrates optical fibers into a traditional phase conductor (live wire) used in electrical

What is OPPC Cable? Optical Phase Conductor

OPPC cable (Optical Phase Conductor) It is a type of optical cable specialized for electrical energy. This aerial cable combines fiber optic units within phase conductors, thus having a

P1595/D7, Dec 2021

Scope: This standard covers the performance, test requirements, procedures, and acceptance criteria for a transmission line phase conductor with optical fibers commonly known as optical phase

Fiber Optic Cable Manufacturer – ADSS · OPGW · OPPC for Power

Fiber optic cables for power lines are fiber optic cables installed on towers or poles of overhead transmission lines. ZMS manufactures and wholesales various types of fiber optic cables. Mainly

Optical Fiber Composition Phase Conductor

Description: Optical Fiber Composition Phase Conductor (OPPC) is the optical cable that compounds the fiber in the phase conductor.
