

PDU Fiber Optic Rack Hot-Selling Inventory Configuration Solution

Overview

Eaton PDUs Eaton offers a tiered portfolio of ePDUs with capabilities ranging from basic power distribution to advanced power management and precision contr.

Key Takeaways

Hot-selling PDU solutions for fiber optic racks combine modular design, high-density outlets, customizable configurations, and intelligent monitoring for optimal power management. Standard and Modular PDUs Modern PDUs for fiber optic racks are designed with flexibility and modularity in mind.

Standard PD

Us can be horizontal (1U) or vertical, with common outlet types like IEC320 C13 or UK BS1363, and varying cable lengths to match rack requirements. Modular designs allow users to customize the number and type of outlets, cord entry positions, and even chassis color for easy identification of A/B power feeds in racks, enhancing operational clarity and safety (Olabs Fiber Solutions, Eaton).

High-

Density and Configurable Options High-density PDUs maximize outlet count in limited rack space, supporting up to 54 configurable outlets with IEC or NEMA modules. Users can mix and match modules, configure cord lengths, and use tool-less mounting systems for quick installation. Color-coded chassis and alternating phase outlets simplify power feed identification and improve rack organization, which is particularly useful in large-scale data centers (Eaton).

Custom and Engineered-to-

Order PDUsFor specialized requirements, custom PDUs can be engineered to meet exact voltage, current, outlet type, and space constraints. Vendors like Vertiv and Raritan offer engineered-to-order solutions, including tailored receptacle counts, component layouts, visual identification, and advanced metering or intelligence features.

These PD

Us are tested in UL-certified labs to ensure compliance and reliability, and can support high power capacities ranging from 60kW to 135kW (Vertiv, Raritan). Intelligent and Switched PDUsSwitched PDUs provide network-based monitoring and control, allowing per-outlet power measurement, remote reboot, and power sequencing. Features like Per Outlet Power Sensing (POPS) enable monitoring of current, voltage, power factor, and energy consumption for individual devices or groups.

This is ideal for fast-growing environments, colocation facilities, or any setup requiring precise power management and load balancing (Server Technology).

Key Considerations for Hot-

Selling Inventory

Rack Compatibility: Ensure PDUs fit standard 19" EIA racks or wallmount configurations. Outlet Flexibility: Offer multiple outlet types and counts to accommodate diverse equipment. Monitoring and Intelligence: Include smart or switched PDUs for remote management and energy efficiency.

Customization Options: Provide modular or engineered-to-order PDUs for unique voltage, current, or space requirements. Compliance and Safety: UL certification and international standards ensure reliability and regulatory compliance. By combining modular design, high-density configurations, intelligent monitoring, and customization, these PDUs represent the most hot-selling and versatile solutions for fiber optic rack power distribution in modern IT environments.
