Polish Warranty Co-packaged Optical QSFP28

Overview

Between 2011 and 2015, there were enhanced quad small-form-factor pluggable (QSFP), QSFP28, SFP28, CFP2, and CFP4.

Key Takeaways

QSFP28 optical transceivers, including co-packaged solutions, are widely available with vendor warranties, often including lifetime or standard coverage, and can be sourced in Poland through authorized distributors. Overview of QSFP28 ModulesQSFP28 (Quad Small Form-Factor Pluggable 28) modules are high-speed optical transceivers designed for 100G Ethernet. They operate with four 25 Gbps channels, achieving a total of 100 Gbps throughput.

Modules can use LC or MPO connectors, supporting single-mode or multi-mode fiber, and may include MUX/DEMUX functionality to reduce fiber usage. Popular types include SR4 (short-range), LR4 (long-range), ER4, ZR4, and newer single-lambda modules like LR1 or DR1. Co-packaged optical QSFP28 modules integrate the transceiver closely with the switch ASIC or router, improving power efficiency and reducing latency.

Warranty Options

Many vendors provide robust warranty coverage for QSFP28 modules: FS.com offers a lifetime warranty on 100G DWDM QSFP28 modules, with 100% testing and a 30-day free return policy. Cisco QSFP28 100G ZR modules come with standard manufacturer warranties and support, including compliance with CMIS 5. 2 and interoperability with third-party equipment.

EDG

E Optical Solutions provides MSA-compatible modules that can be reprogrammed for device compatibility, typically covered under standard vendor warranties. In Poland, these warranties are generally honored through authorized distributors or local resellers, such as Fibermarkt, which supplies QSFP28 modules with verified quality and support. Co-packaged modules may have specific warranty terms depending on the integration with the host device, so it is recommended to confirm coverage with the vendor or distributor.

Considerations for Polish Buyers

Ensure the vendor or distributor is authorized to provide warranty service in Poland. Check whether the warranty covers co-packaged or integrated modules, as some warranties may only apply to standalone transceivers. Verify return policies and technical support, especially for high-value modules like ZR or single-lambda QSFP28.

Confirm compatibility with existing network equipment, as co-packaged modules may have stricter requirements. By sourcing QSFP28 modules from reputable vendors with local distribution in Poland, users can secure warranty coverage and technical support for both standard and co-packaged optical transceivers.
