Price list for cables run in cable trays

Overview

Cable tray are used in wiring of buildings to support electrical cables and wires that are used to distribute power, controls and communication.

Key Takeaways

Running cables in a cable tray typically costs between $5 and $50 per meter for the tray itself, with additional labor costs depending on installation complexity and cable type.

Cable Tray Material Costs

The cost of the cable tray depends heavily on the material and design: Steel trays: $5–$25 per meter, widely used for general-purpose installations due to strength and affordability. Aluminum trays: $6–$30 per meter, lightweight and corrosion-resistant, ideal for outdoor or humid environments. Fiberglass (FRP) trays: $10–$50 per meter, suitable for aggressive environments where durability is critical.

Stainless steel trays: Highest cost, used in highly corrosive or hygienic environments. Tray type also affects cost: ladder trays are more expensive but handle heavy loads and heat better, while wire mesh trays are lighter, faster to install, and often more cost-effective for flexible layouts.

Labor Costs for Running Cables

Labor is a significant portion of the total cost. Installing cables in a tray includes hauling, layout, and securing cables, typically at a height of 3 meters. Installation above 3 meters adds roughly 10% more labor cost per 1.

5 meters. Labor costs vary depending on cable type, route complexity, and accessibility. For example, running coaxial or network cables through complex routes can take several hours, increasing labor expenses.

Additional Cost Factors

Supports, brackets, and connectors: Required for proper tray installation and cable management, adding to total cost. Project scale and environment: Large facilities or harsh environments may require more durable trays and additional labor, increasing costs. Modular or snap-together trays: Can reduce installation time and labor costs, offsetting higher material prices.

Typical Total Cost Estimate

For a standard installation: Material: $5–$50 per meter depending on tray type and material. Labor: Can range from $10–$40 per meter depending on complexity, height, and cable type. Thus, the total cost to run cables in a cable tray generally falls between $15 and $90 per meter, with higher-end installations in industrial or corrosive environments potentially exceeding this range.

Choosing the right tray material and design, along with efficient labor planning, can significantly optimize costs while ensuring durability and maintainability.
