Price of Red Light Testing Method for Pigtail Splicing

Overview

Amazon.com: Fiber Light TesterVisual Fault Locator 50KM - VFL Fiber Optic Tester Kit with Universal 2.5mm Connector, Includes FC to LC Adapter, Compatible.

Key Takeaways

The cost of pigtail splicing with Red Light Testing Method typically ranges from $50 to $150 per splice, depending on project size, site conditions, and testing requirements. Overview of the MethodThe Red Light Testing Method involves using a fiber pigtail attached to a source as a launch cable, with a temporary fusion or mechanical splice connecting it to the fiber under test. This allows for single-ended loss measurements without requiring permanent connectors at the source end.

The method is suitable for field measurements and can be combined with OTDR testing for longer fibers or more precise loss characterization. Cost ConsiderationsPer-Splice Labor: Typical fusion splicing costs range from $50 to $150 per splice, which usually includes labor and basic verification of the splice. Testing Equipment: OTDR or light source and power meter testing may be billed separately at $75–$150 per hour if detailed documentation is required.

Project Size and Volume: Larger projects with many splices may reduce the per-splice cost due to volume pricing. Small projects (fewer than 50 splices) may be quoted as a flat rate. Site Conditions: Aerial splicing in accessible areas is cheaper than underground or confined-space splicing, which may require additional safety measures and personnel.

Practical Notes

The Red Light Testing Method is temporary, so splice protectors are not required, but a good cleave and clean splice are essential for accurate measurements. The method introduces slightly more uncertainty than fully terminated connectors, so calibration and careful measurement are important.

Red

Light Communications uses core-alignment fusion splicing machines to ensure low-loss splices, which may influence the overall cost and quality. In summary, while the exact price from RedLight Communications is not publicly listed, you can expect $50–$150 per splice plus potential hourly testing fees, with final costs depending on project specifics, site conditions, and documentation requirements.
