Remote monitoring type optical protection switch for data centers

Overview

POLATIS® optical circuit switching POLATIS offers software-controlled optical circuit switches for provisioning, protecting and monitoring within colocatio.

Key Takeaways

Remote monitoring optical protection switches provide automatic failover, real-time status monitoring, and remote control to ensure high availability and minimal downtime in data center fiber networks.

Key Features

Automatic Protection Switching: These switches detect optical signal degradation or loss and automatically switch to a backup fiber path, ensuring uninterrupted data transmission. For example, the 7707BPX can switch between MAIN and STANDBY inputs when the main signal weakens or fails, with configurable auto or manual switch-back options (Evertz 7707BPX). Remote Monitoring and Control: Modern optical protection switches support SNMP, Web GUI, or SDN integration, allowing operators to monitor input power levels, module status, and switching thresholds remotely.

POLATI

S switches, for instance, enable software-controlled provisioning, testing, and monitoring of fiber connections, reducing human error and operational costs.

High-

Speed Switching: Fast recovery times are critical in data centers. Agiltron's Optical Line Protection (OLP) switches offer switching speeds from milliseconds down to a few nanoseconds, minimizing data loss during fiber failures. Scalability and Integration: Many switches, such as the LASER COMPONENTS 6000n series, support multiple bidirectional channels (up to 16 per rack unit) and can be integrated into existing network management systems using protocols like SDN-OpenFlow, NETCONF, TL1, or SNMP.

POLATI

S switches also provide matrix configurations ranging from 8x8 to 384x384, suitable for large-scale data center deployments. Data Center Applications: These switches are ideal for protecting critical data paths, backbone connections, and high-speed interconnects in colocation, hyperscale, and telecom data centers. They ensure minimal downtime, maintain data integrity, and support automated cross-connects for dynamic provisioning.

Summary

Remote monitoring optical protection switches combine automatic failover, high-speed switching, and remote management to enhance reliability and operational efficiency in data centers. Key options include: Evertz 7707BPX: 2x1 auto-changeover, SNMP-enabled, single-mode fiber.

POLATI

S Optical Circuit Switches: Software-controlled, SDN-enabled, large matrix sizes, low insertion loss.

LASER COMPONENT

S 6000n Series: Multi-channel protection, integrated optical power monitoring, SDN/OpenFlow support.

Agiltron OL

P: Fast recovery (ns to ms), high data rate (up to 200 Gbps), Web GUI management. These solutions are essential for maintaining high availability, low latency, and secure optical connectivity in modern data center networks.

POLATIS® optical circuit switching

POLATIS offers software-controlled optical circuit switches for provisioning, protecting and monitoring within colocation, hyperscale and telecoms data

Protection Switches

The optical protection switches of the Polatis 6000 pss series guarantee maximum security, minimum downtimes, and optimum data security for critical processes in data centers, telecommunications,

Optical Protection Switch | Industrial & Telecom Network Equipment ...

These units are particularly well suited for protection in any type of fiber data transmission, including CWDM & DWDM links. The OPS52 includes monitoring capabilities for both the working and

Optical Protection Switch

1 spare fiber monitoring. It can protect against fiber cuts or network failure by switching to alternate line to maintain optical signal transmission when main lin breaks down at any time. Its rea switching

Optical Protection Switch

The SPEED-OTS-5000 System is a modular multiprotocol WDM system with up to 400 Gbps per service for the realization of high bit rate, secure and scalable optical data center couplings.

MS8100 OLP27, 1 + 1 Optical Line Protection Switch (OLP)

The MS8100 series uses the FCP MS software and supports CLI, Telnet and SNMP managements that enable service configuration and performance monitoring. It is easy to check important data, alarms,

Audit-Ready Remote High-Density Automated Optical Switch for DCs

Audit-ready remote fiber management combines robotic optical switching, cryptographic logging, and policy-based approvals to bring compliance discipline to the physical network layer.

Fiber Optical Line Protection Switch (OLP), 5ns Fast Recovery

This design allows the switch to operate independently without communicating, reducing reaction time. Moreover, our system has a built-in laser and detector to monitor the spare fiber line, ensuring its
