S5700 Viewing the Optical Module

Overview

Taking the Huawei 5700 series switches as an example, the commands to view optical module information are as follows: Transceiver Type :1000_BASE_SX_SFP Connector Type :LC Wavelength(nm) :850 Transfer Distance(m) :300(50um),150(62.5um)If an optical module on an interface is faulty, you can run the display commands to view information about the optical module. Checking transceiver parameters allows users to monitor real-time operating status and locate link faults rapidly. We have 14 Huawei S5700 Series manuals available for free PDF download: Configuration Manual - Network Management, Hardware Description, Hardware Installation And Maintenance Manual, Quick Configuration, Quick Start Manual, Configuring And. How to Stack Huawei S5700-28X-LI-AC Switches Through Service Ports?

Solution: The stacking method and steps for Huawei S5700-28X-LI-AC Switch are as follows: The connection topology for service port stacking includes chain and ring connections. Configure the first two 10G optical ports of each.

An optical module implements optical-to-electrical or electrical-to-optical conversion, and connects to an optical fiber cable for transmitting signals. You can run a command to display optical module

Displaying Optical Module Information

The optical module design does not comply with the EMC, its anti-electromagnetic interference capability is low, and the optical module brings electromagnetic interference to surrounding devices.

How to View Optical Module Parameters

If an optical module is installed in a running device, you can run the display interface transceiver command to view parameters of the optical module, including the center wavelength, transmission
