Selling network server racks at prices

Overview

Sell your used servers, storage, and networking equipment. Competitive quotes and fair prices. Free pickup for qualifying lots.

Key Takeaways

Network server racks can sell anywhere from $100 for basic wall-mounted units to over $5,000 for high-end enterprise-grade racks, depending on size, features, and condition. Price Ranges by TypeWall-Mount Racks (Small/Edge Units): Typically range from $100 to $600 for compact units suitable for home offices, small businesses, or edge computing setups. These are ideal for mounting routers, switches, and small networking equipment and are often 4U–12U in size.

Mid-

Size / Floor-Standing Racks: These racks, commonly 24U–42U, are used in corporate offices or small data centers. Prices generally range from $500 to $1,500, with fully equipped 42U units costing around $1,450 when assembled. They can support up to 1,600 pounds of equipment and often include integrated fans.

Enterprise / Hyperscale Racks: High-end racks designed for large data centers or AI-optimized infrastructure can cost $2,000 to $5,000 or more. These units often feature high load capacity (1,500kg+), liquid cooling readiness, and compliance with NEMA or ASHRAE standards. Fully equipped setups with servers, storage, and networking equipment can reach $15,000–$50,000 depending on configuration.

Specialized Outdoor or Soundproof Cabinets: These units are priced between $800 and $3,000+, offering weather resistance, insulation, and noise reduction for sensitive environments.

Factors Affecting Price

Size and Height (U Rating): Taller racks (42U–48U) generally cost more due to higher material and load capacity requirements. Material and Build Quality: Steel or reinforced racks with lockable doors and side panels are more expensive than open-frame or basic wall-mounted units. Cooling and Accessories: Integrated fans, liquid cooling manifolds, and cable management features increase cost.

New vs. Used: Used racks can cost 50% less, with decent 12U units starting around $200 on resale platforms. Installation and Additional Infrastructure: Costs for assembly, UPS systems, and dedicated cooling can significantly increase the total investment.

Market Trends

The market is shifting toward AI-optimized and edge computing racks, with high-density liquid-ready designs growing fastest. Smaller 40U and below units are expanding due to floor space constraints in retail and office environments. In summary, the selling price of a network server rack depends heavily on its size, features, and intended use, ranging from $100 for basic units to $5,000+ for enterprise-grade racks, with fully equipped setups potentially exceeding $15,000.

Buying used or knock-down kits can reduce costs significantly while still providing reliable performance.
