Sockets in each distribution box

Overview

Understand distribution boxes (DB boxes) in 5 minutes. Learn about types, components, functions, and uses. Find the perfect DB box for your needs.

Key Takeaways

Distribution box sockets include CEE and Schuko types, available in pre-wired or empty configurations for 1- and 3-phase applications, with options for indoor, outdoor, and portable use. Types of SocketsCEE Sockets: Commonly used for industrial and construction applications, these sockets handle higher voltages and currents, typically 16 A, 32 A, or higher, and are available in 3-phase configurations for heavy-duty equipment. Schuko Sockets: Standard 230 V sockets for general-purpose use, often integrated alongside CEE sockets in combination distribution boxes for mixed applications.

Pre-

Wired vs Empty Boxes: Pre-wired distribution boxes come with built-in sockets, protective contacts, and sometimes FI (residual current) and LS (circuit breaker) switches, reducing installation effort. Empty boxes allow custom socket configurations and flexibility for specific project requirements.

Construction Sites: Portable socket distributors supply hand-operated tools and temporary power, often with IP44-rated housings for splash and dust protection. Residential & Light Commercial: Wall-mounted or surface-mounted distribution boxes with 16 A or 32 A sockets provide safe power distribution for homes, small shops, or retrofits. Harsh Environments: Impact-resistant rubber or plastic housings protect sockets in outdoor or industrial settings.

Key Features to Consider

Phase Type: Single-phase for standard loads, three-phase for high-power equipment. Ampacity: Ensure the socket matches the total load of the facility or site; common ratings are 16 A, 32 A, and up to 63 A for portable distributors. Ingress Protection (IP): IP44 or higher for outdoor use to prevent moisture ingress.

Safety: Integrated RCDs, protective contacts, and proper insulation are critical to prevent electrical hazards. Mounting Options: Wall-mounted, surface-mounted, or portable units depending on mobility and installation requirements. Examples of ProductsGARO Multiple Sockets: Available for 1- and 3-phase operation, with suspension brackets and impact-resistant materials for harsh environments.

Road

Eu Combination Wall Socket: Pre-wired 16 A and 32 A CEE sockets with Schuko 230 V, IP44 housing, suitable for indoor and outdoor use. Spelsberg Socket Distribution Boards: Flexible options including empty, pre-wired, or ready-to-connect boards with built-in protective devices.

MER

Z Portable Socket Distributors: Compact, impact-resistant units for construction sites, connected downstream of distribution boxes, with RCD protection and IP44 rating. Selecting the right socket for a distribution box depends on load requirements, phase type, environmental conditions, and safety standards, ensuring reliable and safe power distribution for the intended application.
