The jumper wire in the distribution box is too short

Overview

If you have an electrical box with wiring that is too short to make electrical connections to outlets, switches or even another junction box, you will need to add 'pigtails' to the wiring in order to lengthen the wiring so you can use it. The slice only goes down a few inches of the wire, so I am considering cutting this off and just adding a jumper wire to it to extend it the required three inches outside the box (there will be enough wire to add a nut). Is this legal (per NEC 2011)?

Specifically I am unsure if this a violation of. The hot wire is way too short to even be inside of a junction box. I tried and all it did was pull the box downward. Here is how to address this problem. You might be able to get some extra slack, strip it, and make your connections.
