Thickened Network Cabinet Assembly

Overview

Shop durable network cabinets built from cold-rolled steel. Secure your IT and AV equipment with lockable glass doors and side panels.

Key Takeaways

Thickened network cabinets are reinforced enclosures designed to securely house IT and networking equipment, available in wall-mounted or floor-standing configurations, often shipped fully assembled.

Overview

Thickened network cabinets are built with reinforced metal panels, typically cold-rolled or galvanized steel, to provide enhanced durability, stability, and load-bearing capacity for IT equipment, servers, and AV devices. They are available in various sizes, commonly measured in U units (e.g., 6U, 12U), and can be wall-mounted or floor-standing depending on installation requirements. Fully assembled options are available, saving installation time and ensuring structural integrity.

Key Features

Material and Construction: High-quality steel frames with thickened panels for extra strength; some models include tempered glass doors and lockable side panels for security. Protection Ratings: Cabinets may have IP20 for standard IT environments or IP55 for industrial applications, providing dust and water resistance. Load Capacity: Wall-mounted cabinets typically support up to 200 lbs, while floor-standing models can handle heavier equipment.

Accessibility: Many cabinets feature swing-out or hinged-back designs for easy rear access, reversible front doors, and pre-installed accessories for cable management. Assembly and Shipping: Options include fully assembled cabinets or flat-pack kits. Shipping can be arranged via DHL, UPS, FedEx, TNT, or EMS, with delivery times ranging from 35–40 days for bulk orders.

Applications

Thickened network cabinets are suitable for: Small to medium IT networks: Compact wall-mounted cabinets (6U–12U) for switches, routers, and monitoring equipment. Large-scale installations: Floor-standing cabinets for server rooms or data centers requiring high load capacity and robust protection. Industrial environments: IP55-rated cabinets for dust, moisture, or harsh conditions.

Purchasing Considerations

When selecting a thickened network cabinet, consider: Size and U height based on equipment requirements. Material thickness for durability and load support. Protection rating for environmental conditions.

Assembly preference: fully assembled vs. flat-pack. Shipping and delivery options, especially for international orders. Thickened network cabinets provide a secure, durable, and organized solution for housing networking and IT equipment, ensuring both protection and accessibility for maintenance and expansion.
