What is the width of cable trays in Suriname

Overview

The width varies from 25 mm to 600 mm and the height from 25 mm to 125 mm. Cable trays of a special size can be produced according to customer requirements.

Key Takeaways

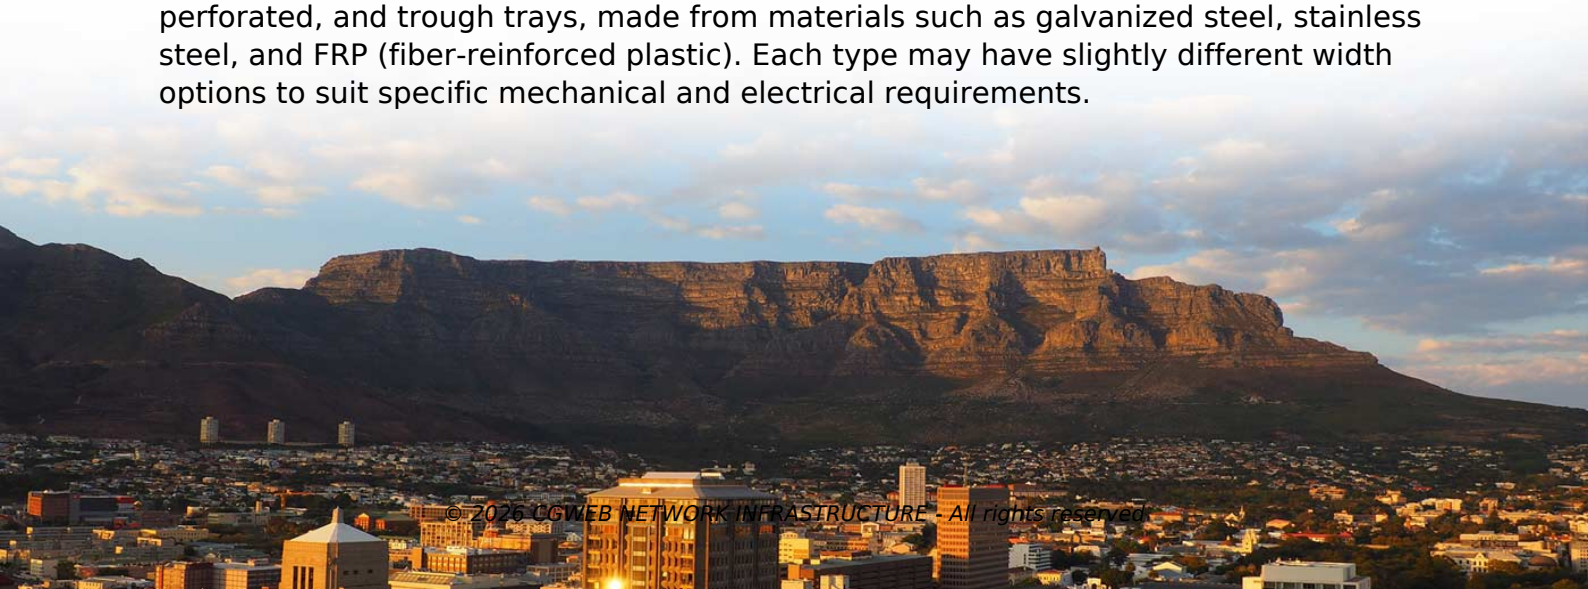

Cable trays in Suriname are commonly available in widths ranging from 50 mm to 900 mm, depending on the application and cable load.

Standard Widths

Cable trays in Suriname are manufactured to accommodate various cable volumes and types, with nominal inside widths typically ranging from 50 mm for small data lines to 900 mm for large industrial or factory installations. The width is the primary factor determining cable capacity, and wider trays allow for better airflow, easier cable installation, and future expansion.

Types and Materials

The most common types of cable trays available in Suriname include ladder, perforated, and trough trays, made from materials such as galvanized steel, stainless steel, and FRP (fiber-reinforced plastic). Each type may have slightly different width options to suit specific mechanical and electrical requirements.

Practical Considerations

Depth and height: Depths usually range from 50 mm to 150 mm, ensuring cables are securely held and heat dissipation is adequate. Segment length: Standard tray sections are typically 3 meters long, facilitating transport and installation. Fill capacity: For safety and heat management, trays are recommended to be filled to no more than 40% of their total capacity.

Customization

Many suppliers in Suriname offer custom widths and fittings to meet specific project requirements, ensuring compliance with international standards such as NEC, NEMA, and IEC. This flexibility allows for tailored installations in commercial, industrial, and data center environments. In summary, when selecting a cable tray in Suriname, the width should be chosen based on the number and type of cables, airflow requirements, and future expansion, with standard options ranging from 50 mm to 900 mm.
