What material are the clamps that come with the junction box made of

Overview

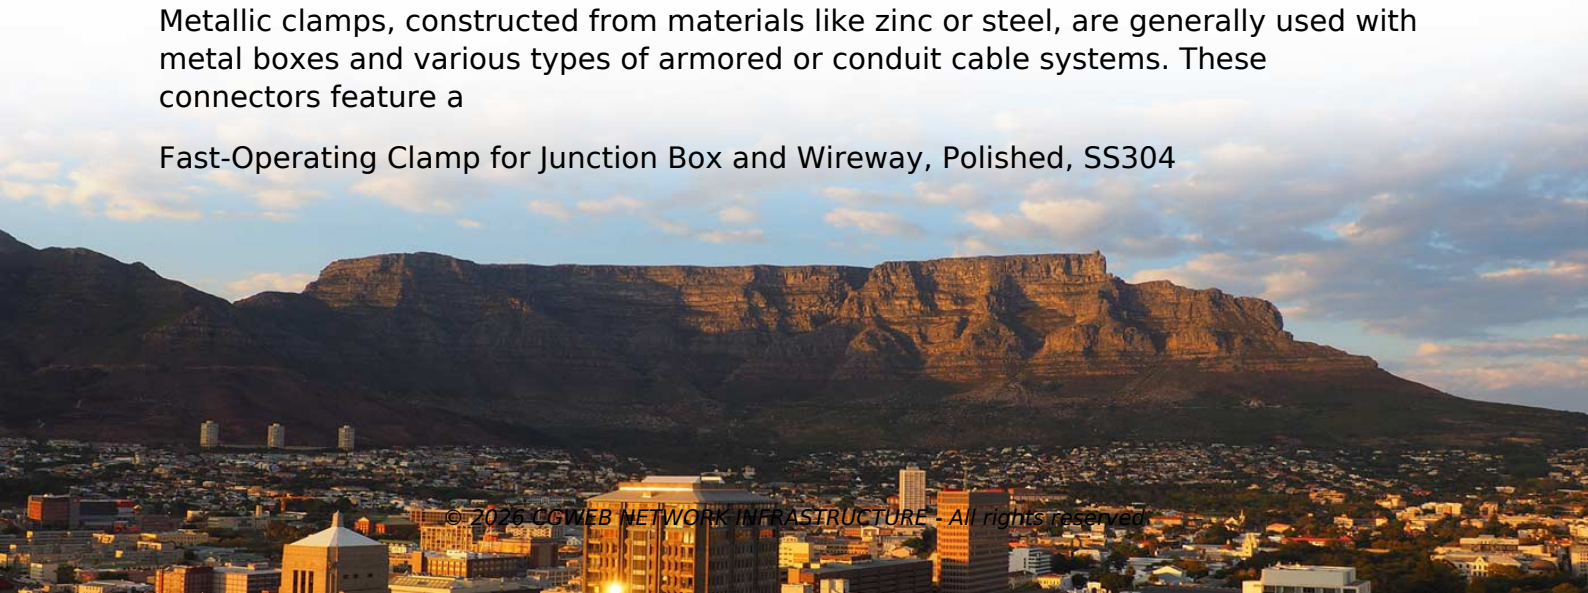

Metallic clamps, constructed from materials like zinc or steel, are generally used with metal boxes and various types of armored or conduit cable systems. These connectors feature a threaded body that inserts through a knockout hole, secured by a separate metal locknut tightened. A junction box clamp, often called a cable connector or strain relief fitting, is a specialized hardware component designed to secure an electrical cable where it enters a junction box or other electrical enclosure. This device creates a mechanical bond between the cable's outer jacket and the wall. Provides quick access to Junction Box and Wireway which have screw clamps. Clamps are available in plated steel or stainless steel. 14QR series junction box quick release clamps install on standard clamp brackets and designed for use with Hammond's 1414 and HJ series enclosures, as well as 1485 wireways and 1486 series troughs.
