Why can t I close the valve in the distribution box

Overview

Issue: A tear in the internal part called the diaphragm would cause the valve not to close. It's possible your valves have been opened manually. Normally, if the valve can't close tight, first confirm whether the valve is closed or not. Please review the following checklist: Water Turned Off Insufficient Voltage Clogged Solenoid Exhaust Ports Station Not Activating It is always a good idea to make sure the water supply to your irrigation system is on. Next, inspect the electrical connections and controller settings for malfunctions, ensuring they are not sending continuous power to. When a sprinkler zone keeps running, the usual culprits are a stuck valve, debris in the diaphragm, or a control signal fault. If one station keeps spraying long after its run time, you're dealing with water still passing through the control valve or a controller that never told that valve to. These valves are used to open, close, distribute, or mix liquids, such as in fertigation systems. These solenoid valves are further classified into different types, the normally closed (NC) solenoid valve, the normally open (NO) solenoid valve, or the Bi-stable solenoid valve.
