# Wiring price for primary distribution box

## Overview

Key cost drivers include panel amperage, indoor vs outdoor location, wiring length, and whether a full panel upgrade or rerouting is needed.

## Key Takeaways

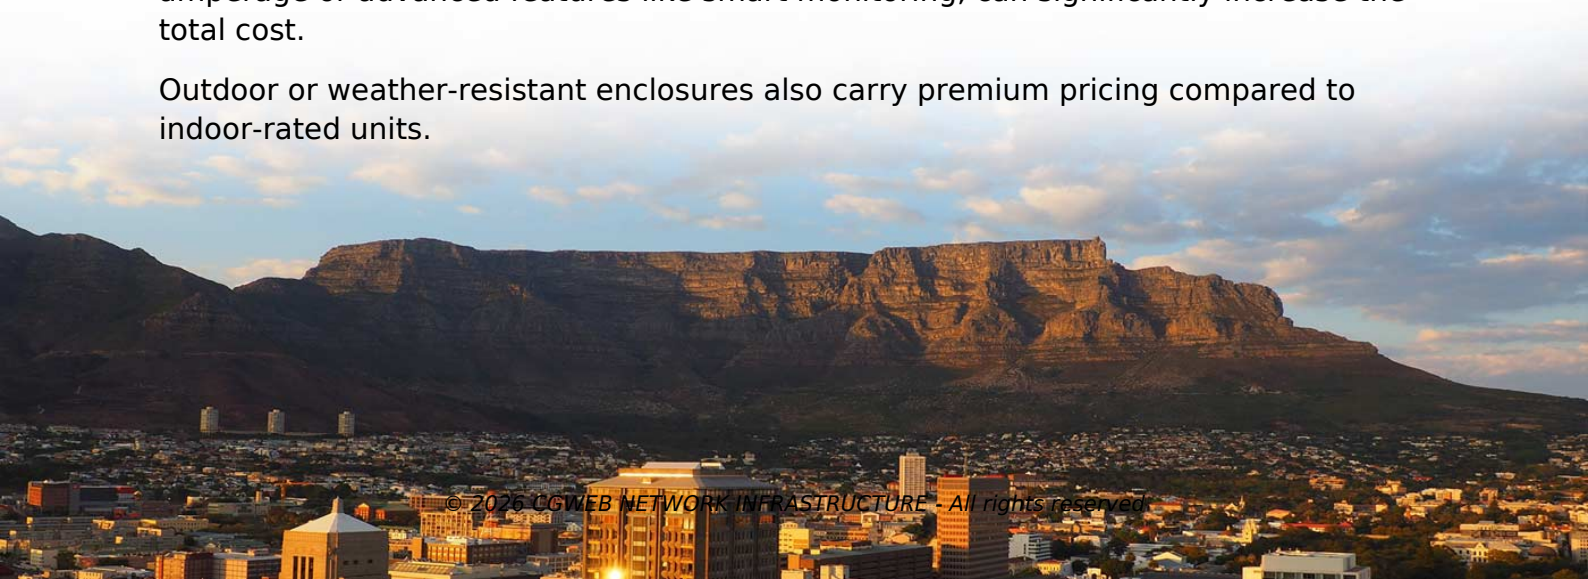

The cost of wiring a primary distribution box typically ranges from $300 to $365 per wiring run, with total installation costs varying based on box type, amperage, and project complexity.

### Distribution Box Costs

The price of a primary distribution box depends on its type, material, and capacity. Common types include residential, industrial, explosion-proof, and intelligent (smart) distribution boxes. Materials such as aluminum alloy, steel, or plastic affect pricing, with aluminum and steel generally costing more than plastic.

Standard residential boxes can range from $10–$25 for plastic units, while industrial steel boxes may cost around $40 or more. Certified boxes, such as IEC61439-compliant units, can be 20–30% more expensive due to higher reliability and safety standards. Commercial and industrial boxes, especially those with higher amperage or advanced features like smart monitoring, can significantly increase the total cost.

Outdoor or weather-resistant enclosures also carry premium pricing compared to indoor-rated units.

## Wiring and Installation Costs

The wiring for a primary distribution box involves connecting feeders from the substation to the box and distributing power to downstream circuits. The average cost to install electrical wiring is approximately $302–$365 per wiring run, depending on site conditions, labor rates, and material choices. Labor hours typically range from 6–18 hours, with electricians charging $75–$120 per hour, and additional costs may arise for complex routing, conduit re-routing, or structural modifications.

For a full panel replacement or upgrade, including wiring, breakers, and permits, typical costs are: 100–125A indoor panel: $1,200–$2,500200A outdoor upgrade with meter socket: $3,000–$6,000 These estimates assume standard conduit routing and accessible wiring; costs increase with difficult access, flood-prone areas, or high-end features like smart meters.

## Factors Affecting Total Cost

Amperage and number of circuits: Higher capacity boxes require more wiring and larger breakers. Location: Outdoor installations or urban areas may incur higher labor and permit fees. Material and certification: Certified or high-grade materials increase both box and installation costs.

Complexity of installation: Underground feeders, long wiring runs, or rerouting existing lines add to labor and material expenses. Additional features: Smart monitoring, energy management, or explosion-proof designs increase upfront costs but may offer long-term savings.

## Summary

For budgeting purposes, expect wiring a primary distribution box to cost around $300–$365 per run, with the total project cost influenced by the type of box, amperage, installation complexity, and location. Residential setups are generally more affordable, while industrial or certified boxes with advanced features can significantly increase the overall investment. Factoring in labor, permits, and potential upgrades is essential for an accurate estimate.
